

# Environmental Health Protection

**Because your health doesn't end at the hospital door.**

When waste leaks into shallow wells, burns in open pits, or seeps into farmland, entire communities are put at risk. We design systems that protect the environment while improving hospital practices.

## **Our Work Focuses On:**

- Preventing toxic runoff from entering Somalia's precious groundwater.
- Reducing air pollution near children's homes by replacing open burning.
- Supporting climate-smart practices in fragile ecosystems and urban zones.

■■ Children exposed to hazardous medical waste in unregulated open dumpsites.

■ Overflowing bins and poor landfill management contaminating natural areas.

**We believe hospitals must heal—not harm—the communities they serve.**
