

Hospital Advisory & Policy Development

Because strong hospitals need strong systems behind them.

AIDA helps hospitals and ministries design the policies that keep care safe. That means helping directors create dress codes that meet both hygiene needs and Islamic values, layout blueprints that separate clean and contaminated zones, and staff flow protocols that reduce transmission risk.

Our Support Includes:

- Step-by-step policy development support for IPC, sanitation, and waste handling.
- Customized hospital walkthroughs and infection risk maps.
- Strategic plans for expanding IPC into rural health posts, private clinics, and urban referral centers.

■■■■■ Muslim women health workers reviewing IPC protocols aligned with Islamic dress code.

■ Doctors practicing proper hand hygiene as part of infection control protocol enforcement.

■■■■■■■■ Hospital leadership discussing system-wide IPC and sanitation policy updates.

We help turn everyday chaos into coordinated safety.
